µA78L00 Series Positive-Voltage Regulators

Check for Samples: µA78L00

## FEATURES

- **3-Terminal Regulators**
- **Output Current up to 100 mA**
- **No External Components**
- **Internal Thermal-Overload Protection**
- **Internal Short-Circuit Current Limiting**
DESCRIPTION

This series of fixed-voltage integrated-circuit voltage regulators is designed for a wide range of applications. These applications include on-card regulation for elimination of noise and distribution problems associated with single-point regulation. In addition, they can be used with power-pass elements to make high-current voltage regulators. One of these regulators can deliver up to 100 mA of output current. The internal limiting and thermal-shutdown features of these regulators essentially make them immune to overload. When used as a replacement for a Zener diode-resistor combination, an effective improvement in output impedance can be obtained, together with lower bias current.

The µA78L00C and µA78L00AC series devices are characterized for operation over the virtual junction temperature range of 0°C to 125°C. The µA78L05AI device is characterized for operation over the virtual junction temperature range of −40°C to 125°C.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

Schematic
NOTE: Resistor values shown are nominal.

Absolute Maximum Ratings[1]

over virtual junction temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_I	Input voltage	µA78L02AC, µA78L05C–µA78L09C, µA78L10AC		30	V
		µA78L12C, µA78L12AC, µA78L15C, µA78L15AC		35	
T_J	Virtual junction temperature			150	°C
T_{stg}	Storage temperature range		−65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Package Thermal Data[1]

PACKAGE	BOARD	θ_{JC}	θ_{JA}
SOIC (D)	High K, JESD 51-7	39°C/W	97°C/W
TO-92/TO-226AA (LP)	High K, JESD 51-7	55°C/W	140°C/W
SOT-89 (PK)	High K, JESD 51-7	9°C/W	52°C/W

(1) Maximum power dissipation is a function of T_J(max), θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) − T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability. Due to variations in individual device electrical characteristics and thermal resistance, the built-in thermal-overload protection may be activated at power levels slightly above or below the rated dissipation.

Recommended Operating Conditions

			MIN	MAX	UNIT
V_I	Input voltage	µA78L02AC	4.75	20	V
		µA78L05C, µA78L05AC	7	20	
		µA78L06C, µA78L06AC	8.5	20	
		µA78L08C, µA78L08AC	10.5	23	
		µA78L09C, µA78L09AC	11.5	24	
		µA78L10AC	12.5	25	
		µA78L12C, µA78L12AC	14.5	27	
		µA78L15C, µA78L15AC	17.5	30	
I_O	Output current			100	mA
T_J	Operating virtual junction temperature	µA78LxxC and µA78LxxAC series	0	125	°C
		µA78L05AI	−40	125	

uA78L02 Electrical Characteristics

at specified virtual junction temperature, V_I = 9 V, I_O = 40 mA (unless otherwise noted)

PARAMETER	TEST CONDITIONS	T_J [1]	µA78L02AC			UNIT
			MIN	TYP	MAX	
Output voltage	V_I = 4.75 V to 20 V, I_O = 1 mA to 40 mA	25°C	2.5	2.6	2.7	V
		0°C to 125°C	2.45		2.75	
	I_O = 1 mA to 70 mA	0°C to 125°C	2.45		2.75	
Input voltage regulation	V_I = 4.75 V to 20 V	25°C		20	100	mV
	V_I = 5 V to 20 V			16	75	
Ripple rejection	V_I = 6 V to 20 V, f = 120 Hz	25°C	43	51		dB
Output voltage regulation	I_O = 1 mA to 100 mA	25°C		12	50	mV
	I_O = 1 mA to 40 mA			6	25	
Output noise voltage	f = 10 Hz to 100 kHz	25°C		30		µV
Dropout voltage		25°C		1.7		V
Bias current		25°C		3.6	6	mA
		125°C			5.5	
Bias current change	V_I = 5 V to 20 V	0°C to 125°C			2.5	mA
	I_O = 1 mA to 40 mA				0.1	

(1)   Pulse-testing techniques maintain T_J as close to T_A as possible. Thermal effects must be taken into account separately. All characteristics are measured with a 0.33-µF capacitor across the input and a 0.1-µF capacitor across the output.

uA78L05 Electrical Characteristics

at specified virtual junction temperature, V_I = 10 V, I_O = 40 mA (unless otherwise noted)

PARAMETER	TEST CONDITIONS	T_J [1]	µA78L05C			µA78L05AC µA78L05AI			UNIT
			MIN	TYP	MAX	MIN	TYP	MAX

I$_O$ = (V$_O$/R1) + I$_O$ Bias Current
Figure 4. Current Regulator

Figure 5. Regulated Dual Supply

Operation With a Load Common to a Voltage of Opposite Polarity

In many cases, a regulator powers a load that is not connected to ground, but instead, is connected to a voltage source of opposite polarity (for example, operational amplifiers, level-shifting circuits, and so on). In these cases, a clamp diode should be connected to the regulator output as shown in Figure 6. This protects the regulator from output polarity reversals during startup and short-circuit operation.

Figure 6. Output Polarity-Reversal-Protection Circuit

Reverse-Bias Protection

Occasionally, the input voltage to the regulator can collapse faster than the output voltage. This can occur, for example, when the input supply is crowbarred during an output overvoltage condition. If the output voltage is greater than approximately 7 V, the emitter-base junction of the series-pass element (internal or external) could break down and be damaged. To prevent this, a diode shunt can be employed as shown in Figure 7.

Figure 7. Reverse-Bias-Protection Circuit

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE MATERIALS INFORMATION

TAPE AND REEL INFORMATION

REEL DIMENSIONS

TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

PK (R−PSSO−F3)   PLASTIC SINGLE−IN−LINE PACKAGE

Bottom View
4040234/D   02/2006

NOTES: A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M−1994.
           B. This drawing is subject to change without notice.
           C. The center lead is in electrical contact with the tab.
           D. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion not to exceed 0.15 per side.
           E. Thermal pad contour optional within these dimensions.
           F. Falls within JEDEC TO−243 variation AA, except minimum lead length, pin 2 minimum lead width, minimum tab width.

NOTES:　A.　All linear dimensions are in millimeters.
　　　　　B.　This drawing is subject to change without notice.
　　　　　C.　Publication IPC−7351 is recommended for alternate designs.
　　　　　D.　Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should
　　　　　　　contact their board assembly site for stencil design recommendations. Refer to IPC−7525.
　　　　　E.　Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
